

April 10, 2023

Dear Valued Customer:

Our records indicate that you have requested notification of change by registering in the Avantor™ Performance Materials change notification database or you have purchased the product(s) listed in Appendix A within the last three years.

Classification	R - Regulated, Level 2
Change Type	Regulatory
Tracking	MOC-QUAL-8190
Notification Type	Preliminary
Product(s)	See Appendix A

Description of Change

The MOC code for the products listed in Appendix A will be changing:

From: R

To: NI

Reason for Change

Avantor's current MOC classification system designates that Regulated (R) items are intended for use as food grade chemicals or bulk pharmaceutical excipients.

The impacted solutions are intended for use as cleaning solutions in cleanrooms and controlled areas, and are effective as sanitizers, disinfectants, and fungicides. Due to this, the assignment of Non-regulated with information (NI) better aligns with the product intended usage.

Please note that our current change notification program does not automatically notify customers for changes to NI codes and will only notify customers who have requested enrollment. To request enrollment or to confirm your enrollment status, please contact change.notification@avantorsciences.com

A final notification will be sent upon implementation of the change. Target implementation is May 2023.

Please contact your Avantor™ representative if you have any questions regarding this change. We appreciate your continued confidence and interest in Avantor™ products.

Sincerely,

Matthew Dailey
Product Manager
